**2026 Maritime Silk Road International Conference of Industry-Academia-Research-
Application on Marine and Ecological Environment Session**

Second Announcement

China has put forward four major global initiatives: the Global Development Initiative, the Global Security Initiative, the Global Civilization Initiative and the Global Governance Initiative. Nowadays, low-carbon development has evolved from a simple environmental issue into a key engine for global economic growth, while artificial intelligence (AI) serves as a key theme and powerful tool for social-economy development. To advance the Global Development Initiative from the perspective of ecological safety and strengthen international cooperation in the domains of vegetation structure & function & construction, “green” pest prevention and control & agricultural ecology, ecological restoration of river-lake systems, and sustainable utilization of plant resources, the conference hosted by the Ministry of Education, China — the 2026 Maritime Silk Road International Conference of Industry-Academia-Research-Application on Marine and Ecological Environment Session will be held in **Kunming, China, from October 15 to 18, 2026**. The theme of the conference is “**Interdisciplinary Research Empowers Low-Carbon and Intelligent Ecological Governance**”.

We sincerely invite experts, scholars, researchers, policy makers and practitioners from China and abroad, as well as the people who are interested in ecological safety issues to participate the event. By several sessions, we aim to share the latest scientific research and novel insights, promote academic exchanges and cooperation, boost international Industry-University-Research-Application collaboration, deliver new ideas and solutions for ecological safety challenges, drive innovation of regional ecological governance mechanisms for sustainable development, and contribute to the prosperity of humanity and the health of the planet.
